

3.

have other medical complaints (co-morbidities), which, when combined with the Covid Virus, kills them.

They would not have died without the co-morbidities, because Covid itself does not kill anyone, including children.

When we consider that the normal Influenza Virus kills 500 people a year in New Zealand, and we're told 291 have died 'with' Covid so far, it puts Covid on a level lower than normal influenza.

The majority of those who had Covid did not know they had it, until they were 'tested.' They were not in hospital on the brink of death, they were going about their normal lives, unaware that they had even contracted it.

Covid is not a Medical Virus, it is a Political Virus. It is not a

4.

'Pandemic,' it is a 'Plandemic.' It is all theatre, and scare mongering that is being used by Liberal (Communist) Politicians, to try to force the World to accept a 'World Government' under the U.N.

The Johns Hopkins University did a study of the deaths in the U.S. between January 2020, and January 2021, when Covid was at a high level, and they found the death toll for the year was the same as any other year. Those who had died would have died anyway it seems.

Don't be fooled (or scared), by the propaganda put out by the mainstream media, or the mis-information put out by the Government. Do the maths for yourself.

The **PANDEMIC**

that
never
was?

1.

Over the past two years, the whole world has been entangled in the grip of the most-costly 'Pandemic' ever. Not costly in terms of victims, but the costliest in financial terms. The Covid 19 'Pandemic.'

An almost unimaginable amount of businesses have been forced to close, and millions have lost their livelihoods. Whole economies have been destroyed by the indiscriminate borrowing by Governments, who have then thrown the money away, as though it was all confetti. But, has it been worth it?

These same Governments are now lifting the 'Mandates,' which they had been policing so rigidly, and are letting everything go back to semi-normal, without admitting

2.

they had it wrong in any way. So, how serious was the 'Pandemic' really?

The Bubonic Plague, which decimated Europe in the 1300's had a mortality rate of 50%. It killed one third of the population of Europe in the seven years between 1346 and 1353.

The Spanish 'Flu, infected 500 million people between 1918 and 1920, and 50 million died, which gives it a mortality rate of 10%.

Compared with this, of those who become infected with the Covid 19 virus, 99.7% recover, giving it a mortality rate of 1/3 Of 1%, or .3%.

As Dr Joseph Mercola pointed out, people do not die 'of' Covid. They die 'with' Covid. All those who die with Covid
